TO ALL RADIO AMATEURS BT

N8IWJ To Publish Monthly PROJECT DOVE PRE-LAUNCH NEWSLETTER

Rich Ensign, AMSAT-NA Science Education Advisor, wants to remind amateurs that the BRAMSAT MICROSAT known as DOVE (Digital Orbiting Voice Encoder), is a unique tool to be used by educators in classrooms all over the world. It's globe-circling nature will enable it, once launched, to be used in many areas of the curriculum. DOVE's first activity, dubbed Language Arts Project 1, has students creating messages of peace in many languages to share with each other around the world. DOVE's speech transmissions with a power of up to 4 watts on a frequency of 145.970 MHz should be easily picked up on the ground by basic receivers and scanners. If you are an educator or a radio amateur who is interested in getting a school in your area involved with PROJECT DOVE, there is now available a monthly "PROJECT DOVE PRE-LAUNCH NEWSLETTER" free for the asking. Rich reports that close to 200 educators are currently receiving this publication. The newsletter is written with the "layman" in mind. It will allow educators who are not radio amateurs or even space science buffs to stay up-to-date with PROJECT DOVE as the satellite progresses toward launch. Rich is also working on a comprehensive teacher's guide to DOVE for release at launch time. Why not help a school in your area become involved with this exciting experiment in orbit. To get your target school and teacher on the newsletter mailing list write:
